 HOW MUCH DO YOU KNOW ABOUT MANDARIN FRUIT?

Q1. Where are they from originally?
Mandarins are hybrids of other citrus fruits. Until the Middle Ages, the only known orange was the Bitter Orange (Citrus Aurantium). In the sixteenth century, Portugal brought the variety Citrus Reticulata to Europe. Initially it was known as "mandarin orange or tangerine", and later it adopted just the name of "mandarin".

Q4. Which variety has no seed?
A. The Satsumas and Clementines varieties have no seeds. Just Ortanique variety has.

Q2. Does their names make sense?
A. Satsuma variety (Citrus unshiu) is originally from Japan, although the name "unshui" refers to the Chinese city of Wenzhou. It is one of the most resistant citrus varieties to the cold, being one of the latest in blooming, although the earliest to be harvested.

Q3. Have mandarin trees air-purifying power?
A. Trees absorb and break down most of the major air pollutants. Bordas own mandarin trees lands annually absorb 15,000 kg of CO2.

Q5. Easier to peel
A. Satsuma and Ortanique varieties are easy to peel, while this is not the case of clementines. Due to this, Satsuma and Ortanique varieties are interesting for the industries specialized in orange segments.
